Our Purpose Throughout the Years

The American Dahlia Society, of which we have long been a member, was "Formed for the purpose of stimulating interest in and promoting the culture and development of the Dahlia." Our contribution to this purpose has consistently been to offer to an ever increasing number of Dahlia lovers the highest quality stock possible to grow, in as extensive as possible variety of types and color shades available in tested and worthwhile Dahlias, and at the lowest prices consistent with good stock. It becomes apparent from the many letters and repeat orders of customers over the years that we have not failed in our aims. Excerpts from a few of these letters are found in the body of this catalog, all unsolicited expressions of the way customers feel about our methods of doing business.

Some of you may have discovered that some needed items have been rather scarce and hard to buy during the past several years. There just wasn't enough to go around. Among these items has been good Dahlia stock. The best efforts of the Miller Dahlia Farms to overcome this for our clientele have unfortunately not proved entirely successful. Should our increased supply this year again be unequal to the demand, a revised list will be sent to each one on our mailing list whenever stock becomes exhausted on more than one third of the listed varieties in the catalog.

Several new varieties of our own origination are listed for the first time this year, having been grown for years so that stock is sufficient for sale at prices within the reach of all, rather than the usual prices necessary for 2 or 3 year old seedlings.

As to prices, our policy is "One Price to All" with a discount according to the amount of the order, as explained on the order sheet. In view of the lower purchasing power of our dollars, the real prices on all varieties herein are materially lower than last year, although listed at the same figure. We are deeply appreciative of orders from customers and dealers for stock for re-sale, but in all fairness to the loyal customer who can use but one or two of each variety, the right is reserved to limit the number of roots of any one variety to a customer, if this seems necessary. Regardless of price or shortage, we firmly believe any Dahlia stock purchased from the Miller Dahlia Farms will prove to be—

"The Highest Quality Dahlia Roots Obtainable."

SUCCESS — AT LAST

Port Orchard, Wash., Jan. 24, 1946—"You are the only Dahlia grower I shall ever send another order to. My experience has been very discouraging until I received my order from you last year."—Mrs. C. J. P.

FROM A NEW CUSTOMER

Reno, Nev., Sept. 1, 1946—"I am writing you in regard to the Dahlias I got from you this spring—I have raised Dahlias for years, but these are the most beautiful I ever had. I thought I would let you know how pleased I am with them and thank you for the nice bulbs."—H. K.

American Purity

VARIETIES OFFERED and RECOMMENDED

Roots only are offered, and orders are accepted subject to prior sale of stock on hand at time the order is received, roots being set aside for immediate shipment or for future delivery as the customer wishes. The prices following the varieties include ordinary Parcel Post charges. In parentheses following the variety name is given the name of the introducer or originator and the year first sold.

Abbreviations following the name of the Dahlia refer to the various types as follows:

F.D.=Formal Decorative

St. Cac.=Straight Cactus

S.C.=Semi-Cactus

I.D.=Informal Decorative

INC. CAC.=Incurved Cactus

60¢

The size of the average bloom is indicated by the figures following the abbreviation, thus—Adorable, I.D. $8x4-4\frac{1}{2}$ shows this variety is an Informal Decorative type, with blooms 8 inches in diameter and 4 inches deep, with about a $4\frac{1}{2}$ -foot high plant as grown here. The length of stems is measured from the base of the bloom to the first leaf or bud below it.

ADORABLE, I.D., (Angell, 1935,) 8x4-4½'. 11" stiff stems Blooms facing. Pinard yellow with inner florets flesh pink....25c

ALTMARK, S.C., (from Europe 1935), 8x4—3'. 12" wiry stems.

Blooms facing. White centers, shading to lilac on outer florets. Very early and profuse. Good cut flower......25c

AUTUMN SUNGLOW, S.C. (Miller D. Farms 1937), 9½x4—4½'. 12" stiff straight stems. Some blooms not quite facing. Golden orange buff, narrow florets, heavy bush growth......25¢

SALMON KING, F. D., (Miller D. Farms 1945), 9x5-4'. 15" strong stiff stems. Blooms facing. Glowing salmon buff, deeper shading at centers. Broad heavy florets of good substance	60c
SAND DUNE, F. D., (Miller Dahlia Farms 1946), 9x4-4'. 12" stiff stems. Blooms perfectly facing. Buff orange with shadings and pencilling of peach red, light red reverse. Broad cupped florets of good substance	60c

WONDERFUL BLOOMS SELL PLACE!

Monterey, Cal., Feb. 15, 1946—"Every year I buy Pompon Dahlias from you. When they are all in bloom some one comes along and buys the place, due mostly to the color in the yard. Then I have to start all over again. I will say that flowers around the house are the best real estate salesman anybody could have. Your bulbs have always been satisfactory and the blooms wonderful."—E. W. L.

Satan

SILVERADO, Inc. Cact., 9x4—5'. 12" straight wiry stems. Blooms facing on stems, but slightly dipped on the bush. white with faint lavender shadings, full bloom......15¢

Ø

LOVELY DAHLIAS—AND REASONABLE

Olympia, Wash., Feb. 9, 1946,—"Maybe I should tell you that I have had some lovely Dahlias from you, and they are so reasonable."—Mrs.N. C.

DAHLIA SEEDS ARE INTERESTING

San Diego, Cal., April 4, 1946—"It may interest you to know that the Dahlia seed which you sent me some weeks ago have already come up and so far I have had about seventy-five percent germination, and they are still coming. So you see the percentage will be high."—C. T. W.

P

REGARDING DATE OF SHIPMENT

Roots may be ordered at any time and will be shipped at any date desired by the customer. However, it is advisable to have them sent not too long before the time for planting, as no Dahlia grower can be responsible for any loss which may occur on account of spoiling or drying out of roots which are in the customers' hands for a month or so before planting. And where early orders are used for forcing for the purpose of making cuttings to plant, there is no guarantee against rotting of the roots in this process. In sections where the spring is backward and the ground is still cold and wet in May, it is advised to keep the roots in the peat moss in which they are packed, and they will sprout nicely with hardly any attention, so when the ground is warmed up the new plant will have a better start than if it had been put in the ground earlier. Parcel post charges are all paid by me, and express charges on large shipments, but where small orders are wanted sent during weather when freezing might occur in transit, the shipment will be made express, charges collect.

Snow Pillow

SNOW PILLOW, I. D., (Miller D. Farms 1946), 11x5-5'. 12" stiff strong stems. Blooms facing. White, Broad, heavy and pointed florets, gracefully curled. Good branching habits, allowing 3 ft. stems. Have cut 14" blooms......\$1.00

SOPHISTICATE, I.D. (Miller D. Farms, 1941), 9½x5—5′. 10″ strong, graceful stems. Blooms facing. Amaranth pink with lighter shadings. Excellent keeper, and very profuse. Vigorous bush growth. Occasional open center......35¢

Sophisticate

Springtime

SPRINGTIME, I.D., (Miller D. Farms 1944), 7x3—4'. 9" stiff wiry stems. Blooms perfectly facing. Unusual combination of light peach pink shaded cream, with bright yellow central florets. Very early and profuse, and a splendid keeper
STARBRIGHT, S.C., (Miller D. Farms 1945), 9x4—4'. 15" straight wiry stems. Blooms facing. Pure white, early and profuse. This seedling differs from the American Purity only in the lack of the almost invisible veins found on the florets of the latter
THE COMMODORE, I. D., (Kept 1932), 10x6-3½' 12" strong stems. Blooms facing. Solid unshaded yellow. Profuse 10c
TOPAZ, F. D., (Miller D. Farms 1946), 8x3-4'. 10" stiff wiry stems. Bright yellow flushed and shaded light apricot, deeper center. Early and very profuse
TOWERS EMPIRE, I.D., (Parella 1935), 9½x6—5½'. 10" straight strong stems. Blooms skyward and facing. Very bright golden yellow slightly tinged delicate rose at center. Long heavy florets in a heavy bloom
VOLGA RIVER, I.D., (Feldman 1942), 10x5—4'. 15" straight strong stems. Perfectly facing. Bright scarlet with lemon yellow center and stripes running up into the florets. Full massive bloom. Early and profuse
WARRIOR, F. D., (Miller D. Farms 1946), 9x4-4'. 16" stiff stems. Blooms perfectly facing. Bright scarlet. Broad florets somewhat twisted

P

NO DOUBTS HERE!

Kansas City, Mo., Feb. 4, 1946—"In the past years I have grown many of your Dahlias. Had many wonderful blooms from them. I have had 150 varieties in my Dahlia garden at one time. I know what to expect this year again.—Mrs. V. V. S.

REALLY ENJOYS DAHLIAS

San Diego, Cal., Jan. 14, 1946—"We sure enjoy your Dahlias, such nice roots and they all come good. I have told others of your Dahlias."—Mrs. B. B.

Willie B. Hill

WENOKA, F.D. (Hulin, 1935), 8x5—4½'. 14" straight strong stems. Blooms perfectly facing. Rosy mauve with magenta shadings. Good keeper and rather spectacular35¢
WHITE ABUNDANCE, I.D. (from Europe, 1934), 9x5—5'. 12" straight strong stems. Blooms facing above the foliage. waxy white. Most useful in cut flower work
WHITE GOLD, F.D., (Miller D. Farms 1944), 8x4—3½'. 15" straight stiff stems. Blooms facing. Rich creamy white or very light yellow. A full bloom, with good keeping qualities and profuse
WILLIE B. HILL, S.C., (Miller D. Farms 1945), 10x3—3'. 10" straight stiff stems. Blooms skyward and partly skyward. Light glowing crimson. Full high centers. The unusual lacy attractive foliage with the large delicately colored and formed blooms make this variety a "must have" with all who see it
WISTERIA, F. D., (Miller D. Farms 1945), 9x5-4'. 16" stiff stems. Blooms facing. Clear deep orchid. Full blooms, good substance
YOUR LUCKY STAR, S. C., (Amer. D. Farms 1939), 9x4-4'. 12" straight strong stems. Blooms facing. Amaranth pink, central florets white. High centers. Profuse and a good cut flower
YOUTH, F.D. (Parrella 1936), 6x3—4½'. 8" straight stems. Blooms facing. Deep carmine, more or less tipped and striped white. Narrow folded florets in a full bloom

PRETTIER THAN OTHERS—ANYWHERE

West Greenville, S. C., Feb. 4, 1946—"I have ordered Dahlias from you for several years. At this time I would like to say I have been well pleased with them. People buy them and say they are prettier than any they have seen anywhere."—Mrs. E. H. C.

SAN TOY, White, heavily tipped carmine. Large.

SHERRY, Violet purple, tall bush

SPECKLES, Deep red and white, variegated.

SYLVIA MORGAN, Light pink, large.

TOM THUMB, Light red, very small.

TOTO, Deep maroon, large. Tall.

VANIRA, Bright pale yellow, lightly tipped carmine.

P

COME BACK FOR MORE EACH YEAR

Mountain View, Cal., Jan. 16, 1946. "Your bulbs are so good we come back every year.—We are old, 84 years." W. H. P.

Cultural Directions

For the healthy growth and the lovely blooms your Dahlia planting should be expected to produce, just a few simple requirements are demanded. These are easy to understand and follow when we consider the manner in which the Dahlia plant grows.

The root division which we plant has an eye near or on the part of the stalk which forms the top of the root. This eye contains the really important part of the entire root, and from it a stalk and feed roots grow to form the Dahlia plant. The rest of the root is merely a dinner basket to supply the necessary nour-ishment for starting the new plant. As soon as the feed roots, very fine at first, reach the point where they start to supply enough plant food to enable the newly-formed leaves above ground to begin work, the original root has performed its purpose, and may as well be disregarded. In proof of this, the root you plant may be cut in half or a still smaller portion be planted with a resultant vigorous plant, providing the conditions of soil and moisture, etc., are made right.

Thus the new plant needs nothing in the way of fertilizer or irrigation until the new feed roots are established. And the more numerous and faster-growing these feed roots, the stronger the plant and the better crop of roots for the next year. Any fertilizer should for this reason, not be placed in the hole in which the root is planted, but spread over the entire Dahlia plot, as the new roots will cover in most cases the entire space allotted to your Dahlias.

Some of these new roots will thicken and begin to store up starch and other food elements, forming the new crop of storage roots. It is when these are growing and the buds on the plant are beginning to open that plenty of plant food and water are necessary. It is known that one bloom in its formation requires many times the water and food that is needed for the foliage and stalk growth.

It is clear anything which tends to interfere with the growth of these new feed roots will stunt the growth of the plant, so an over-supply of water at the start, or the presence of rotting vegetation or manure, anything which will cause these roots to rot before they reach a healthy growth, is to be avoided. Plenty of room is needed for root development and space between plants should be enough for good ventilation to avoid mildew of the foliage.

With an understanding of these requirements, we can plan the best way to plant and care for the Dahlias.

The soil should be loose and well drained. Spading deeply as soon as the ground can be worked in the spring is a necessary part of preparation. On heavy clay soil some sort of humus should be worked in, and some sand or fine coal ashes. If new clay, a dressing of agricultural lime raked in the surface after spading will be of advantage. If the ground has been planted to a root crop the year before an application of bone meal and potash should be made, and this worked into the surface before planting. About 5 pounds of bone meal and 1 pound of Muriate or Sulphate of Potash to every 10 plants.

When the soil has warmed up nicely, and not until then, is the time to plant. DO NOT PLANT A DAHLIA ROOT IN COLD, WET GROUND, and expect anything but failure. Some varieties may pull through, but nothing is gained by planting too early. A hole about 5 inches deep in heavy soil, to as deep as 8 inches in light sandy soil, is dug for each root, and allow at least 3 feet each way between holes. This for the large varieties. The Pompons may be spaced closer, also the miniatures

for mass effects. A stake should be driven close to the hole and the root laid therein with the eye or sprout facing up, and toward the stake. The root should be covered about two inches, and the hole gradually filled in as the plant grows. It may be tied to the stake with soft twine or rag to avoid cutting the stalk.

For a bushy plant with numerous blooms the plant may be pinched out after the 3rd set of leaves forms. This will force the buds at the base of the plant to develop and the plant will spread out. For large blooms, pinch out the buds on each branch down to the base buds leaving only one bud to a stalk. This allows long stems for cutting or exhibition, As Pompons and Miniatures are somewhat valued in inverse ratio to their size, none of these should be disbudded, but the young plant may be pinched out to make more blooms.

There are a few insect pests which may infect your Dahlias, depending on your locality. Aphis or other sucking insects, or leaf hoppers or other chewing insects. There are a number of good sprays and dusts on the market, including the new DDT which may be used according to directions on the package. Your local feed store or hardware dealer will help you select whichever is indicated by your local conditions.

The ground around the Dahlia plants should be kept in a loose condition by frequent cultivation, deep at first and then shallower as the plant grows and the feed roots spread out, and near the surface. If your summer is very hot, a mulch between the Dahlias of grass clippings, or other material, will help keep the ground cool and avoid overheating the roots. During extreme heat it is advisable to pick off the buds and not allow blossoms to form, thus saving any possible dangerous wilting of the plant.

When watering, after the buds have started to open, and not until then, it is better to give the ground a thorough soaking once a week or every ten days, than to sprinkle the surface every day. The moisture should reach down about a foot to be of the most value.

Dahlia blooms should be cut either early in the morning before the sun starts to dry them out, or late in the evening. The best method of cutting for long keeping blooms, is to carry a bucket of cold water into the garden and plunge the stem of the Dahlia into it as soon as it is cut from the bush. A knife should be used instead of scissors, as the object is to not press the stem shut, but rather leave it so that it will absorb water readily for the bloom. The cut flowers should then be placed in the cold water container, in a cool dark place, and away from any drafts, for several hours, or if cut in the evening, over night. After that they are ready for placing in your vases or other containers for display, and will keep much longer than if any other method of preparation is used. Too much foliage left on the stem will greatly lessen the keeping quality of the bloom.

After the first killing frost the Dahlia clumps should be dug and stored for the winter. If the sections where there is no frost, or where it comes very late in the year, the plants may be cut down any time and after allowing a few days for the sap to go down into the roots, the clumps may be dug and cared for the same as if they had been killed by frost. It is well to dig the dirt away from the clump and cut down with the spade all

ACKNOWLEDGMENT OF ORDERS

All orders are either shipped or acknowledged by return mail.

GUARANTEE—All roots sent out are guaranteed to be sound, healthy, true to name and to have at least one live eye or sprout. Any root found unsatisfactory must be returned within three weeks of its receipt by the customer, for replacement or refund of the purchase price. Should a Dahlia prove untrue to name, it will be replaced the following season. No further obligation than the amount paid for the root is assumed by the Miller Dahlia Farms under this guarantee.

Full cultural directions for planting, cultivating and fertilizing the Dahlias are enclosed with each shipment. Also how to take care of the roots over winter. Any points not covered in these instructions will be gladly furnished on request.

IDENTIFICATION OF ROOTS—Stamped indelibly on each root is its name. This is done at the time of dividing the clumps so that there is very little possibility of a root being mislabeled.

SUBSTITUTIONS—Stock of some varieties may not be equal to the demand, and to save time and correspondence or the necessity of a refund, it is suggested the customer allow the privilege of substituting similar varieties when necessary, especially in later orders. Extra value is always given in such cases.

C. O. D. ORDERS—No C.O.D. orders accepted without a deposit of at least 25% of the amount of the order. Collection charges will be added to the amount to be collected by the postman.

DISCOUNTS—It has been found there is some saving in overhead expense and labor when large orders are sent out, and this saving is returned to the customer as follows:

Orders amounting to \$30.00 or more deduct 20% Orders amounting to \$20.00 or more deduct 15% Orders amounting to \$10.00 or more deduct 10%

The discount to which your order entitles you may be deducted in sending in the remittance with your order, or will be supplied by me in the form of extra roots of my selection, in which case usually somewhat better value is given than the exact amount as listed.

Make checks and money orders payable to MILLER DAHLIA FARMS. Cash, stamps and currency accepted only at sender's risk.

around it rather deep before lifting it out. This will cut the feed roots which may extend out as far as two feet from the stalk, and which might break some of the roots from the stalk if not cut. Any roots which are broken at the neck will probably not be any good the following spring.

The clump may be allowed to stand for a while to dry out the dirt, which may then be shaken off gently. Or a gentle stream of water may be used to wash the clumps. The stalk should then be cut off close to the clump, and it is then ready to be divided or stored.

A cool not too dry cellar is the best place for root storage, being sure it is frost proof. It does not need much below freezing to ruin Dahlia roots. Also, dry warm air will cause the roots to dry out and shrivel up, so that most of them will not grow in the spring.

In dividing the clumps, all that is necessary is to have an eye for each root saved, and these eyes are plainly visible at the time of digging, if one wishes to divide them then. This will do away with the possibility of stem rot, which sometimes spoils the entire clumps. Cut surfaces may be dusted or dipped in powdered lime or sulphur and the roots packed in boxes of fine sawdust, or even dry dirt. The name of the variety may be written on the root with an indelible pencil, moistening the surface so the writing will be permanent. This avoids the possibility of lost tags and mixed-up varieties.

Any special problems not covered will be gladly considered on request, and all available information thereto will be given.

THAT FASCINATING SEEDLING PLOT

Many customers report the pleasure they experience from watching the development of new and different Dahlia varieties each year, grown by them from seed purchased from the Miller Dahlia Farms. It is unusual for seed to produce anything exactly like the Dahlia from which it was picked, and as this method of growing seedlings is the way new varieties are produced, the interest one has in creating these new Dahlias can be easily understood. We especially recommend our Pompon and Miniature seed. A packet or two of these planted in the spring will surprise you later in the summer with a profusion of blooms of almost every conceivable combination of colors, and mostly Pompon or Miniature types.
